

Course Description
YEAR 1

Fall	CSD 302 Anatomy & Physiology – Peripheral Hearing Gross and fine structure; function of the peripheral auditory system. CSD 401 Signals, Systems & Acoustics for the Communication Sciences Introduction to the measurement, analysis and synthesis of acoustic signals. CSD 423 Evaluation of Peripheral Hearing Basic audiometric and immittance techniques; interpretation of test results. Lecture and laboratory. CSD 423 Lab CSD 409-1 Foundations of Clinical and Professional Practice - Introduction Professional issues for audiologists, including professional communication, emotionally intelligent leadership, clinical decision-making theory and practice, critical thinking, and theoretical-clinical integration of knowledge and skills. Clinic Enrollment Clinical Benchmarking
Winter	CSD 306 Psychoacoustics Principles underlying perception of pitch, loudness, auditory space, auditory patterns, and speech. Psychophysical procedures for studying psychoacoustics and the impact of hearing impairment are considered. CSD 411 Hearing Aids I Electroacoustic characteristics of hearing aids, selection of amplification systems, and client management. Lecture and laboratory. Prerequisites: CSD 423-0 or consent of instructor. CSD 411 Lab CSD 422 Anatomy & Physiology of Central Hearing Neuroanatomical and neurophysiological aspects of the central auditory pathway. CSD 409-2 Foundations of Clinical and Professional Practice - Leadership Professional issues for audiologists, including professional communication, emotionally intelligent leadership, clinical decision-making theory and practice, critical thinking, and theoretical-clinical integration of knowledge and skills Clinic Enrollment Clinical Benchmarking
Spring	CSD 406 Medical Aspects of Audiology Modules covering embryology, genetics, molecular biology, and pharmacology/ototoxicity. Topics related to both the auditory and vestibular systems are covered within each module. CSD 420 Pathologies Physiologic abnormalities of the auditory system that result in hearing impairments. CSD 425 Electrophysiology of the Human Auditory System Neuroanatomical and neurophysiological bases of human auditory evoked responses; administration and interpretation of the procedures used in evoked response testing; and relationship between pathophysiology and evoked response results. Hands-on laboratory experience. CSD 425 Lab

Course Description

	CSD 409-3 Foundations of Clinical and Professional Practice - Integration (0.5) Professional issues for audiologists, including professional communication, emotionally intelligent leadership, clinical decision-making theory and practice, critical thinking, and theoretical-clinical integration of knowledge and skills Clinic Enrollment Clinical Benchmarking
Summer	CSD 419 Pediatric Assessment Etiological factors; hearing screening and assessment; implications of hearing impairment in infants and young children; sensory aids; treatment programs; and parent counseling. Prerequisites: CSD 423-0 or consent of instructor. CSD 428 Fundamentals of Vestibular Science Introduction to theoretical foundations of vestibular science, function testing and management. Topics include the structure and function of the vestibular system, other sensory and motor systems necessary for balance, vestibular pathology, and nonvestibular sources of dizziness and tinnitus. CSD 522 Hearing Loss Prevention and Conservation (0.5) Impact of environmental noise, hearing conservation practices, and related laws and policies related to noise and hearing. Experience in measurement of noise sources. CSD 409-4 Foundations of Clinical and Professional Practice - Critical Thinking (0.5) Professional issues for audiologists, including professional communication, emotionally intelligent leadership, clinical decision-making theory and practice, critical thinking, and theoretical-clinical integration of knowledge and skills. Clinic Enrollment Clinical Benchmarking

YEAR 2

Fall	CSD 424 Evaluation & Treatment of CAPD (0.5) Neurobiological bases of Central Auditory Processing Disorders (CAPD), administration and interpretation of CAPD test measures, and remediation and management plans for patients diagnosed with CAPD. CSD 429 Vestibular Assessment & Treatment Evaluation and treatment of individuals with balance disorders, including electrophysiologic evaluation of the vestibular system. CSD 521 Cognition and Aging (0.5) A seminar devoted to issues related to older adults, including changes in health and cognition with age. Current knowledge relevant to older adults, and discussion of scientific literature relevant to aging and cognition. Emphasis on using current information to guide clinical decisions. CSD 508 Capstone Research Methods Seminar in contemporary research practices and procedures in clinical audiology. CSD 409-5 Foundations of Clinical and Professional Practice- Precepting
------	---

Course Description

	Professional issues for audiologists, including professional communication, emotionally intelligent leadership, clinical decision-making theory and practice, critical thinking, and theoretical-clinical integration of knowledge and skills. Clinic Enrollment
Winter	CSD 407 Implants Cochlear implants and other implantable hearing devices. Candidacy, device management, and performance with various CSD 408 Business Practices Legal, ethical, and governmental influences on the profession of audiology, applicable to all work settings and across all practice models. The audiologists' role in healthcare, legal and ethical requirements, the importance of appropriate documentation, and foundations of coding and reimbursement. Rules and regulations of managed care, pricing and delivery models, business planning and marketing. CSD 570-1 Seminar: Capstone Development and execution of project relevant to clinical audiology. First Quarter: critical review of clinical research. Second Quarter: research methods for audiology. Third Quarter: professional writing and communication. CSD 409-6 Foundations of Clinical and Professional Practice- Ethics Professional issues for audiologists, including professional communication, emotionally intelligent leadership, clinical decision-making theory and practice, critical thinking, and theoretical-clinical integration of knowledge and skills. Clinic Enrollment Capstone Progress Presentation
Spring	CSD 414 Hearing Aids II Advanced amplification, including alternatives to traditional hearing aids such as over-the-counter (OTC) amplification and personal sound amplification processors (PSAPs). Hearing assistive technology, and personal and group amplification options. Focus on adult device use. CSD 427 Otoacoustic Emissions (0.5) Theoretical and practical considerations of otoacoustic emissions; clinical applications; interpretation of test results. CSD 523 Assessment & Management of Tinnitus & Sound Tolerance (0.5) A seminar devoted to management of tinnitus and of sound tolerance problems, including hyperacusis. Management of hearing impairment in older adults and discussion of scientific literature relevant to professional practice. Emphasis on the evaluation of new information, and the use of that information to make patient decisions. CSD 570-2 Seminar: Capstone Development and execution of project relevant to clinical audiology. First Quarter: critical review of clinical research. Second Quarter: research methods for audiology. Third Quarter: professional writing and communication. CSD 409-7 Foundations of Clinical and Professional Practice- Alternate Delivery Models (0.5) Professional issues for audiologists, including professional communication, emotionally intelligent leadership, clinical decision-making theory and practice, critical thinking, and theoretical-clinical integration of knowledge and skills. Clinic Enrollment

Course Description

	Capstone Progress Presentation
Summer	CSD 519 Pediatric Amplification & Educational Audiology A seminar devoted to amplification for infants and children. Current knowledge relevant to hearing aid selection, fitting, validation, and verification in infants and children. The course also covers issues relevant to classroom acoustics, classroom amplification and device use, and the role of the educational audiologist. CSD 570-3 Seminar: Capstone Development and execution of a project relevant to clinical audiology. First Quarter: critical review of clinical research. Second Quarter: research methods for audiology. Third Quarter: professional writing and communication. CSD 409-8 Foundations of Clinical and Professional Practice- Aural Habilitation Professional issues for audiologists, including professional communication, emotionally intelligent leadership, clinical decision-making theory and practice, critical thinking, and theoretical-clinical integration of knowledge and skills. Clinic Enrollment Capstone Poster Presentation

YEAR 3

Fall	CSD 580-1 Externship
Winter	CSD 580-2 Externship
Spring	CSD 580-3 Externship
Summer	CSD 580-4 Externship
